

Chapter 2 - Progress

Aim: Construct a Phylogenetic tree of Tribolium species using orthologous genes

- Get the orthologous genes among the 5 species.
- Do a multiple sequence alignment.
- Construct a phylogenetic tree
- Estimate Divergence time.
- Data collected
- √ 50% Data Analysis
- √ 10% Writing Done

Chapter 3 - Progress

Aim: Find out if Sex Chromosomes are Inactivated in Meiotic cells using scRNA-seq

- Get expression from Meiotic cells in Tribolium castaneum.
- Compare X-linked genes expression with autosomal expression in Meiotic cells.
 - Check non-meiotic cells to confirm.
